The composition is useful for preventing or composition comprises oligo and is administered to reduce the production or availability, or to increase the degradation of the target mRNA or to reduce the amount of target polypeptide present in the lungs. The pulmonary obstruction, and/or bronchoconstriction and/or lung inflammation, allergies and/or surfactant hypoproduction are associated with a disease or condition such as pulmonary vasoconstriction, andlargies, asthma, impeded respiration, respiratory hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary transplantation rejection, pulmonary infections, bronchitis or cancer. The reduced adenosine content of the anti-sense oligos corresponding to thymidines present in the target RNA serves to prevent the breakdown of the oligonucleotides into products that free adenosine into the system corresponding to the first any invaried affects dine to its sue environment and thereby, to

comprising oligonucleotides, effective for alleviating
comprising oligonucleotides, effective for alleviating
comprising adenosine sensitivity, levels of adenosine (A) or (A) receptors,
comprising adenosine sensitivity, levels of adenosine (A) or (A) receptors,
comprising adenosine sensitivity, levels of adenosine (A) or (A) receptors,
comprising of a target polyposecretion, when administered to a mammal. The
coligonucleotides are derived from a gene encoding or regulating
compression of a target polyposecretion, when administered to a mammal. The
coligonucleotides are derived from a gene encoding or regulating
compression of a target polypositide associated with lung airway or lung
comprises on reaccer and can be anti-sense to the corresponding mRNA.
comprises, in separate containers, (b) the oligonucleotides, (c)
composition for adding a carrier and for use of the kit. The composition
comprises of the invention has antiallergic, antiinflammatory, antiasthmatic,
composition for adding a carrier and for use of the kit. The composition
composition comprises oligo and is administered to reduce the production
composition comprises oligo and is administered to reduce the production
composition, allergies and/or bronchoconstriction and/or lung
composition, allergies and/or bronchoconstriction and/or lung
composition, allergies and/or bronchoconstriction are associated
composition, allergies, asthma, impeded respiration, respiratory
composition, allergies, asthma, impeded respiration, respiratory
composition, and/or surfactant hypoproduction are associated
composition, allergies, asthma, impeded respiration, respiratory
composition, and composition such as pulmonary vascoomstriction
composition and composition of the target polyposition and composition of the composition
composition of target polyposition and composition of the composition
composition and composition of the composition of the production

                                                                                                                                                                                                                                                                                 S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes an isolated nucleic acid molecule CC comprising: (a) nucleotides 1-3081 of the 3081-bp sequence of a human 5-CC HT7 receptor promoter region (see ADP47717), or a fragment exhibiting 5-CC HT7 receptor promoter activity; (b) the complementary strand of (a); or CC (c) a nucleic acid capable of hybridising under stringent conditions to CC (a) or (b). Also described: (1) an isolated regulatory element of the 5-CC (T) a nucleic acid capable of hybridising under stringent conditions to CC molecule; (3) a host cell transformed with the vector; (4) a method for identifying compounds which are modulators of human 5-HT7 receptor promoter enhancer activity; (6) a method for identifying compounds that modulate the activity of the barbiturate-inducible element CC within the 5-HT7 receptor promoter region; (7) a method for identifying CC compounds that modulate the activity of the barbiturate-inducible element CC within the 5-HT7 receptor promoter region; (8) a method for identifying CC compounds capable of modulating the 5-HT7 receptor promoter region; (8) a method for identifying CC compounds capable of modulating the 5-HT7 receptor promoter enhancer CC activity; and (9) a method for identifying polypeptides which bind to CC serotonin mediated responses. The 5-HT7 receptor promoter has CC gastrointestinal, neuroleptic, antidepressant and antimigraine CC activities, and can be used in gene therapy. The nucleic acid is useful in preparing a composition for treating conditions related to serotonin-mediated responses, e.g., schizophrenia, depression, migraine, affective buman 5 cd isorders selective.

compound that binds to the polypeptide in an amount sufficient to compound that binds to the polypeptide in an amount sufficient to compound that binds to the polypeptide in an amount sufficient to compound that binds to the polypeptide in an amount sufficient to compound that binds to the polypeptide in an amount sufficient to compound that the presence of or predisposition to a disease associated with altered levels of POLYX DNA or protein in a first mammalian subject, involving measuring the level of expression of DNA or the amount of C protein in a sample from the first mammalian subject amount of DNA or protein in a sample from a second mammalian subject cancunt of DNA or protein in a sample from a second mammalian subject can level of DNA or protein in the first subject can compared to the control sample indicates the presence of a secompared to the disease. The sequences of the invention are useful for treating or preventing a POLYX-associated disorder which involves cantibody is useful in the manufacture of a medicament for treating a syndrome associated with a human disease. This sequence represents a PCR primer used to amplify a human POLYX polynucleotide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   16-SEP-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     encoding them. The invention also relates to an antibody that immunospecifically binds to a POLYX polypeptide, a method of determining the presence or amount of a POLYX polypeptide in a sample involving contacting the sample with a probe that binds to the polynucleotide and determining the presence or amount of the probe bound to the DNA, a method of identifying an agent that modulates the expression or activity of a POLYX polypeptide involving providing a cell expression the polypeptide, contacting the cell with the agent and determining whether the agent modulates expression or activity of the polypeptide indicates a alteration in expression or activity of the polypeptide indicates a modulation, and a method of modulating the activity of a polypeptide modulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; POLYX; PCR; ss; POLYX-associated disorder; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         23-OCT-2003.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human POLYX polypeptides and the polynucleotides encoding them. The invention also relates to an antibody that

                                                                                                                                                                                                                  The present invention relates to an oligonuclectide anti-sense to e.g., initiation codon, coding region with 2-10 nuclectides of 5'-end and 3'-end of nuclectic acid target comprising gene(s) chosen from e.g. interleukin (IL)-4 receptor, IL-5 receptor or salts of the oligonuclectide and optionally surfactant operatively linked to the oligonuclectide. The method is useful for preventing or treating a respiratory or lung disease, which involves administering to the airways of a subject an effective amount of an inhibitor. The oligonuclectide is useful for production of a medicament for the prevention and/or treatment of a respiratory or lung disease. The respiratory or lung disease is chosen from airway inflammation, allergy(ies), asthma, impeded respiration, cystic fibrosis (CF), chronic obstructive pulmonary diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            interleukin; II-4 receptor; II-5 receptor; lung disease; airway inflammation; allergy; asthma; impeded respiration; cystic fibrosis; acute respiratory distress syndrome; pulmonary hypertension; lung inflammation; bronchitis; oligonucleotide;

                                                                                                                                                                                        The present invention relates to an oligonucleotide anti-sense to e.g., cc initiation codon, coding region with 2-10 nucleotides of 5' end and 3'-ce end of nucleic acid target comprising gene (s) chosen from e.g. cc interleukin (IL)-4 receptor, IL-5 receptor or salts of the cc oligonucleotide and optionally surfactant operatively linked to the cc oligonucleotide. The method is useful for preventing or treating a CC respiratory or lung disease, which involves administering to the airways cf a subject an effective amount of an inhibitor. The oligonucleotide is cc useful for production of a medicament for the prevention and/or treatment cc useful for production of a medicament for the prevention and/or treatment cc respiratory or lung disease. The respiratory or lung disease is cc chosen from airway inflammation, allergy(ies), asthma, impeded cc respiration, cystic fibrosis (CF), chronic obstructive pulmonary diseases (COPD), allergic rhinitis (AR), acute respiratory distress syndrome (ARDS), pulmonary hypertension, lung inflammation, bronchitis, airway construction. The present sequence represents an oligonucleotide of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to an oligonucleotide anti-sense to e.g., initiation codon, coding region with 2-10 nucleotides of 5'-end and 3'-cend of nucleic acid target comprising gene(s) chosen from e.g. interleukin (IL)-4 receptor, IL-5 receptor or salts of the coligonucleotide and optionally surfactant operatively linked to the oligonucleotide. The method is useful for preventing or treating a respiratory or lung disease, which involves administering to the airways of a subject an effective amount of an inhibitor. The oligonucleotide is useful for production of a medicament for the prevention and/or treatment of a respiratory or lung disease. The respiratory or lung disease is cohesen from airway inflammation, allergy(ies), asthma, impeded respiration, cystic fibrosis (CF), chronic obstructive pulmonary diseases (COPD), allergic rhinitis (AR), acute respiratory distress syndrome (ARDS), pulmonary hypertension, lung inflammation, bronchitis, airway character and the collection of the prevention and or treatment of the prevention and or treatment of comparison of the prevention and/or treatment of a respiration, cystic fibrosis (CF), chronic obstructive pulmonary diseases (COPD), allergic rhinitis (AR), acute respiratory distress syndrome (ARDS), pulmonary hypertension, lung inflammation, bronchitis, airway

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel compound 8-80 nucleobases in length which is targeted to and specifically hybridises with a nucleic acid molecule encoding PTPRA (protein tyrosine phosphatase, receptor type alpha, LCA-related phosphatase; LRP; HLPR; HPTPA; PTPRL2; RPTPA) and inhibits the expression of PTPRA. The compound of the invention demonstrates cytostatic activities and may be useful for treating a disease or condition associated with PTPRA, such as a hyperproliferative disorder or metabolic disorder as well as in research and disgnostics for modulating the expression of PTPRA. The current sequence is that of a human PTPRA DNA of the invention which was targeted for antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WO2004011623-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New compounds, particularly antisense oligonucleotides targeted to a nucleic acid encoding protein tyrosine phosphatase receptor type alpha (PTPRA), useful for treating hyperproliferative or metabolic disorder.

The compound of the invention demonstrates cytostatic activities and may be useful for treating a disease or condition associated with PTPRA, such as a hyperproliferative disorder or metabolic disorder, as well as in research and dispnostics for modulating the expression of PTPRA. The current sequence is that of an antisense 2'-MOE (2'-methoxyethy!) gagmer oligonucleotide which was targeted to human PTPRA of the invention.

                                                                                                                                                                                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to a novel antisense compounds that modulate the expression of isoprenylcysteine carboxyl methyltransferase (also known as ICMT, pcMTase, PPMT, ppMTase, HSTE14, MST098 and MSTP098) and CC located on chromosome 1p36. Specifically, it refers to compositions CC useful for inhibiting the expression of isoprenylcysteine carboxyl CC methyltransferase, which normally participates in cellular events such as CC growth factor signal transduction, cell replication, vesicular transport and the post-translational modification of the Ras family of GTPases. The CC present invention describes antisense oligonucleotides that comprise at CC least one modified nucleobase, a 5-methylcytosine. Accordingly, these compounds are useful for treating a disease or condition associated with isoprenylcysteine carboxyl methyltransferase such as a hyperproliferative CC disorder (e.g. cancer), an inflammatory condition, hypertension or CC cardiovascular disease. As such, they exhibit cytostatic, antisense only and are useful for research reagents and in diagnostics. This oligonucleotide sequence is a phosphorothicate antisense DNA oligo used to modulate human and carboard mathyline and carboard mathyline and carboard mathyline of the compounds of the compounds.

This invention relates to a novel antisense compounds that modulate the CC expression of isoprenylcysteine carboxyl methyltransferase (also known as CC ICMT, PCCMT, pcMTase, PPMT, PPMTase, HSTE14, MST098 and MSTP098) and CC located on chromosome 1p36. Specifically, it refers to compositions CC useful for inhibiting the expression of isoprenylcysteine carboxyl CC methyltransferase, which normally participates in cellular events such as CC growth factor signal transduction, cell replication, vesicular transport CC and the post-translational modification of the Ras family of GTPases. The CC least one modified sugar moiety, a 2'-O-methoxyethyl (2' MOE) and at CC least one modified nucleobase, a 5-methylcytosine. Accordingly, these CC compounds are useful for treating a disease or condition associated with isoprenylcysteine carboxyl methyltransferase such as a hyperproliferative CC disorder (e.g. cancer), an inflammatory condition, hypertension or CC cardiovascular disease. As such, they exhibit cytostatic, antiinflammatory, hypotensive and cardiant activities and are useful for research reagents and in diagnostics. This oligonucleotide sequence is a CC DNA oligo representing a preferred target site for antisense therapy in human isoprenylcysteine carboxyl methyltransferase, given in an CC exemplification of the invention.
                                                                                                                                                                                                                                                                   RESULT 1112

                                                                                                                                  The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mpqES-1). The CC human mpGES-1 gene is located on chromosome 9, more specifically to Q934.3. The present invention also describes: (1) antisense compounds, CC mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC mpGES-1 in cells or tissues; and (3) a method of the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antisfiammatory, neuroprotective, and antisense compounds have cytostatic, cophthalmological, immunomodulator, cardiant, neuroprotective, cophthalmological, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1-e.g., inflammation, Alzheimer's CC ophthalmoic, immunological, cardiovascular or neurological disorder.

The present sequence represents a chimeric antisense oligonucleotide chargeted to human microsomal prostaglandin E2 synthase (mGCES-1). The human mGGES-1 gene is located on chromosome 9, more specifically to 934.3. The present invention also describes: (1) antisense compounds, chargeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid encoding chibits its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues; and (3) a method of treating an animal chargeted to a compound the compound conting a disease or condition associated with mPGES-1. MPGES-1 chimeric charing a disease or condition and antisense compounds have cytostatic, antisense oligonucleotides and antisense compounds have cytostatic, antistinflammatory, neuroprotective, notropic, antiarthritic, vasotropic, antiinflammatory, neuroprotective, notropic, antiarthritic, vasotropic, ophthalmological, immunomodulatory and cardiovascular activities, and can be used as mPGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          microsomal prostaglandin E2 synthase; mPGES-1; mPGES-1 inhibitor; microsomal prostaglandin E2 synthase inhibitor; cytostatic; antidiabetic; immunomodulator; cardiant; neuroprotective; antiinflammatory; neuroprotective; nottropic; antiarthritic; vasotropic; ophthalmological; immunomodulatory; cardiovascular; gene therapy; inflammation; Alzheimer's disease; arthritis; diabetes; cancer; ischaemia; reperfusion injury; ophthalmic disorder; immunological disorder;

Claim 4; SEQ ID NO 1526; 132pp; English

The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The

e.g.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       condition associated with mpcES-1 immunomodulatory and cardiovascular activities, and can be used as mpcES-1 inhibitors and in gene composition of condition associated with merapical conditions as a much and cardiovascular activities, and can be used as mpcES-1 inhibitors and antisense compounds, (2) a method of inhibiting the expression of mpcES-1 in cells or tissues; and (3) a method of treating an animal mpcES-1 in cells or condition associated with mpcES-1. (A) immunomodulator, cardiant, neuroprotective, antisense oligonucleotides and antisense compounds have cytostatic, antidiabetic, immunomodulator, cardiant, neuroprotective, vasotropic, condition associated with mpcES-1. (A) immunomodulatory and cardiovascular activities, and can be used as mpcES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mpcES-1 e.g., inflammation, Alzheimer's condition associated with mpcES-1 inflammation, Alzheimer's compound condition associated with mpcES-1 e.g., inflammation, Alzheimer's compound condition associated with mpcES-1 inflammation, Alzheimer's compound condition associated with mpcES-1 e.g., inflammation, Alzheimer's compound condition associated with mpcES-1 inflammation, Alzheimer's compound condition associated with mpcES-1 e.g., inflammation, Alzheimer's compound condition associated with mpcES-1 e.g., inflammation, Alzheimer's compound condition condition condition condition cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a chimeric antisense oligonucleotide contrageted to human microsomal prostaglandin E2 synthase (mpGES-1). The CC targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The CC p34.3. The present invention also describes: (1) antisense compounds, CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 and CC antisense oligonucleotides and antisense compounds have cytostatic, CC antidiabetic, immunomodulator, cardiant, neuroprotective, and can intinflammatory, neuroprotective, nootropic, antisense or ophthalmological, immunomodulatory and cardiovascular activities, and can be used for preparing a composition for treating a disease or condition associated with mpGES-1 entisense compound can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's condition associated with mpGES-1 e.g., inflammation, Alzheimer's component of the properior of the pro

                                                                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mpGES-1). The human mpGES-1 gene is located on chromosome 9, more specifically to 934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mpGES-1, which specifically horidise with the nucleic acid encoding inhibits its expression; (2) a method of inhibiting the expression of mpGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mpGES-1. MpGES-1 chimeric antisense oligonucleotides and antisense compounds have cytostatic, antisting lammatory, neuroprotective, nouroprotective, antistinflammatory, neuroprotective, nootropic, antistinflammatory, neuroprotective, nootropic, antistinglandialpological, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mpGES-1 e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                        Matches

chimeric; antisense oligonucleotide; phosphorothioate; human; microsomal prostaglandin R2 synthase; mpGES-1; mpGES-1 inhibitor; microsomal prostaglandin R2 synthase; mpGES-1; mpGES-1 inhibitor; antidiabetic; inmunomodulator; cardiant; neuroprotective; antiinflammatory; neuroprotective; nootropic; antiarthritic; vasotropic; ophthalmological; immunomodulatory; cardiovascular; gene therapy; inflammation; Alzheimer's disease; arthritis; diabetes; cancer; ischaemia; reperfusion injury; ophthalmic disorder; immunological disorder; cardiovascular disorder; neurological disorder; ss.
                                     antisense oligonucleotides and antisense compounds have cytostatic, antisense oligonucleotides and antisense compounds have cytostatic, antisense oligonucleotides and antisense compounds have cytostatic, antisinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic, ophthalmological, immunomodulatory and cardiovascular activities, and can be used as mPGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mPGES-1 e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 9934.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues, and (3) a method of treating an animal having a disease or condition associated with mPGES-1.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ADM14961 standard;
                     The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 9q34.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibits its expression; (2) a method of inhibiting the expression of
                                                                                                                                                                                                                                                                                                                                                  New antisense compound, having a sequence targeted to a nucleic acid encoding mPGES-1, useful for preparing a composition for treating e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                25-SEP-2002; 2002US-0413549P

The CC human mPGES-1 gene is located on chromosome 9, more specifically to CC 933.3. The present invention also describes: (1) antisense compounds, CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC mpGES-1, which specifically hybridise with the nucleic acid encoding CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1 entitieric CC antisense oligonucleotides and antisense compounds have cytostatic, CC antisense oligonucleotides and antisense compounds have cytostatic, CC antisense oligonucleotides and antisense compounds have cytostatic, CC antisinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic, CC antistalmological, immunomodulatory and cardiovascular activities, and can be used as mpGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 9d34.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mPGES-1. MPGES-1 chimeric antisense oligonumleridae and associated with mPGES-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         antisense oligonucleotides and antisense compounds have cytostatic, antidiabetic, immunomodulator, cardiant, neuroprotective, antiinflammatory, neuroprotective, noutropic, antiinflammatory, neuroprotective, nootropic, antiinflammatory, neuroprotective, nootropic, antiinflammatory, neuroprotective, nootropic, antiinflammatory, and cardiovascular activities, and can obe used as mPGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mPGES-1 e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or

                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mpCES-1). The human mpCES-1 gene is located on chromosome 9, more specifically to 9344.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mpCES-1, which specifically hybridise with the nucleic acid mPCES-1 and inhibits its expression; (2) a method of inhibiting the expression of mPCES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mPCES-1. MPCES-1 chimeric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic.

The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The CC thuman mpGES-1 gene is located on chromosome 9, more specifically to CC 9q34.3. The present invention also describes: (1) antisense compounds, CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mpGES-1, which specifically hybridise with the nucleic acid mpGES-1 and CC inhibits its expression; (2) a method of inhibiting the expression of CC mpGES-1 in cells or tissues; and (3) a method of treating an animal CC having a disease or condition associated with mpGES-1. MpGES-1 chimeric CC antisense oligonucleotides and antisense compounds have cytostatic, CC antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic, antiinflammatory, neuroprotective, nootropic, antisense oligonucleotides and in gene therapy. The antisense compound CC condition associated with mpGES-1 inclammation, Alzheimer's CC condition associated with mpGES-1 e.g., inflammation, Alzheimer's CC condition associated with mpGES-1 e.g., inflammation of the condition inflammation inflammatical condition inflammation inflammatical condition inflammat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Alzheimer's disease; arthritis; diabetes; cancer; ischaemia; reperfusion injury; ophthalmic disorder; immunological disorder; cardiovascular disorder; neurological disorder; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              human mPGES-1 gene is located on chromosome 9, more specifically to 9q34.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mPGES-1. MPGES-1 chimeric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antidiabetic, immunomodulator, cardiant, neuroprotective, vasotropic, antiarthritic, vasotropic, antiarthritic, vasotropic, antiarthritic, vasotropic, ophthalmological, immunomodulatory and cardiovascular activities, and can be used as mPGES-1 inhibitors and in gene therapy. The antisense compound can be used for preparing a composition for treating a disease or condition associated with mPGES-1 e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
                                                                                                                                                                                                                                                                                                                                                 Homo sapiens.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The CC human mPGES-1 gene is located on chromosome 9, more specifically to Q334.3. The present invention also describes: (1) antisense compounds, CC mPGES-1, which specifically hybridise with the nucleic acid encoding CC mPGES-1, which specifically hybridise with the nucleic acid encoding CC mPGES-1 in cells or tissues; and (3) a method of inhibiting the expression of CC mPGES-1 in cells or condition associated with mPGES-1. MPGES-1 chimeric CC antisense oligonucleotides and antisense compounds have cytostatic, antisinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic, CC antisinflammatory, neuroprotective, nootropic, antistributies, and can be used as mPGES-1 inhibitors and in gene therapy. The antisense compound CC can be used for preparing a composition for treating a disease or condition associated with mPGES-1 e.g., inflammation, Alzheimer's CC condition associated with mPGES-1 ischaemia or reperfusion injury, or ophthalmic, immunological, cardiovascular or neurological disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                       The invention relates to oligonucleotides anti-sense to an initiation codon, coding region, 5' or 3' intron-exon junction, intron or region codon, coding recipion, 5' or 3' intron-exon junction, intron or region codon, coding recipion, 5' or 3'-end of a nucleic acid target chosen from a gene encoding interleukin (II)-4 receptor, interleukin (II)-6 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention code is relates to a method of screening a candidate compound that binds to one or more nucleic acid target(s) or expressed product(s), for the codigonucleotides are useful for reducing or inhibiting expression of a congene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor, cCCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are cuseful for preventing or treating a respiratory or lung disease. The cc respiratory or lung disease is associated with hyper-responsiveness to inflammation or an inflammatory disease. The respiratory or lung disease is consen from airway inflammatory disease. The respiratory or lung disease (CCP), chronic obstructive pulmonary disease (COPD), calleric thinite archive respiratory distress sundrome. pollognary

The oligonucleotides are useful for preventing or treating a respiratory or lung disease. The respiratory or lung disease is associated with hyper-responsiveness to and/or increased levels of, adenosine and/or levels of adenosine A receptor(s), and/or asthma and/or lung allergies associated with inflammation or an inflammatory disease. The respiratory or lung disease is chosen from airway inflammation, allergy, asthma, impeded respiration, cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to oligonucleotides anti-sense to an initiation codon, coding region, 5' or 3' intron-exon junction, intron or region with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)-5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, tryptase b, PDE4 B, PDE4 B, PDE4 C or PDE4 D. The invention also relates to a method of screnning a candidate compound that binds to one or more nucleic acid target(s) or expressed product(s), for the prevention and/or treatment of a respiratory or lung disease. The oligonucleotides are useful for reducing or inhibiting expression of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel single or multiple target oligonucleotide anti-sense to e.g. initiation codon, intron of respiratory disease-relevant gene e.g. CCR1, RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Shahabuddin

CCR1, e.g.

Claim 2; SEQ ID NO 637; 174pp; English.

The invention relates to oligonucleotides anti-sense to an initiation CC codon, coding region, 5' or 3' intron-exon junction, intron or region CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target CC chosen from a gene encoding interleukin (II)-4 receptor, interleukin (II)-6 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 CD 7 DE4 D. The invention CC also relates to a method of screening a candidate compound that binds to CC one or more nucleic acid target(s) or expressed product(s), for the CC prevention and/or treatment of a respiratory or lung disease. The CC constant of the constant of a respiratory or lung disease a, CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are useful for preventing or treating a respiratory or lung disease. The CC crepiratory or lung disease is associated with hyper-responsiveness to CC and/or increased levels of, adenosine and/or levels of adenosine A creceptor(s), and/or asthma and/or lung allergies associated with cC inflammation or an inflammatory disease. The respiratory or lung disease

Also described are: inhibiting the expression of IAP-like; and cells or tissues; screening for a modulator of IAP-like; a diagnostic method for identifying a disease state comprising identifying the presence of IAP-like in a sample using at least one of the primers selected from 2 sequences comprising SEQ ID NO. 5 or 6, or the probe comprising SEQ ID NO. 7, a kit or assay device comprising the compound; and treating an animal having a disease or condition associated with IAP-like. The compound is useful for modulating the expression of IAP-like. It is also useful for diagnosing or treating diseases associated with expression of IAP-like, e.g. a hyperproliferative disorder. This sequence represents a human inhibitor of apoptosis (IAP)-like antisense

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 1130
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes a compound 8-80 nucleobases in length targeted to a nucleic acid molecule encoding inhibitors of apoptosis (IAP)-like, where the compound specifically hybridises with the nucleic acid molecule encoding IAP-like comprising 16000 bp (SEQ ID NO. 4) and inhibits the expression of IAP-like. Also described are: inhibiting the expression of IAP-like in cells or tissues; screening for a modulator of IAP-like; a cidagnostic method for identifying a disease state comprising identifying the presence of IAP-like in a sample using at least one of the primers selected from 2 sequences comprising SEQ ID NO. 5 or 6, or the probe comprising SEQ ID NO. 7; a kit or assay device comprising the compound; and treating an animal having a disease or condition associated with IAP-like. The compound is useful for modulating the expression of IAP-like. It is also useful for diagnosing or treating diseases associated with expression of IAP-like, e.g. a hyperproliferative disorder. This sequence represents a human inhibitor of apoptosis (IAP)-like antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

The compound is useful for modulating the expression of IAP-like. It is also useful for diagnosing or treating diseases associated with expression of IAP-like, e.g. a hyperproliferative disorder. This sequence represents a human inhibitor of apoptosis (IAP)-like antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New compound targeted to a nucleic acid molecule encoding inhibitors apoptosis (IAP)-like and inhibits expression of IAP-like, useful for modulating the expression of IAP-like or for treating, e.g. hyperproliferative disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes a compound 8-80 nucleobases in length targeted to a nucleic acid molecule encoding inhibitors of apoptosis (IAP)-like, where the compound specifically hybridises with the nucleic acid molecule encoding IAP-like comprising 16000 bp (SEQ ID NO. 4) and inhibits the expression of IAP-like. Also described are: inhibiting the expression of IAP-like, also described are: inhibiting the expression of IAP-like; a screening for a modulator of IAP-like; a

The compound is useful for modulating the expression of IAP-like. It is also useful for diagnosing or treating diseases associated with CC expression of IAP-like, e.g. a hyperproliferative disorder. This sequence control of the compound is useful for modulating the expression of IAP-like.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁

```
of breast cancer comprising detecting the presence of absence of one or more polymorphic variations associated with breast cancer in a nucleic acid sample from a subject. The method of the invention has cytostatic applications and may be useful for identifying a subject at risk of breast cancer, for early diagnosis, prevention and treatment of breast cancer, possibly via gene therapy, as well as to analyse and predict a response to a breast cancer treatment and in clinical druy trials. The current sequence is that of an Extend primer (also described as probe) of the invention which was used to genotype human intercellular adhesion molecule ICAM-1/ICAM-4/ICAM-5 gDNA. ICAM-1 (human rhinovirus receptor; BB2; CD54; cell surface glycoprotein P3.58) has been mapped to chromosomal position 19p13.3-p13.2, ICAM-4 (Landsteiner-Wiener blood group; LW) has been mapped to chromosomal position 19p13.3-pha been mapped to chromosomal position 19p13.3-pha been mapped to chromosomal position 19p13.2-cen and ICAM-5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Identifying a subject at risk of breast cancer by detecting the presence of polymorphic variations in the ICAM, MAPK10, KIAA0861, NUMA1 or GALE regions which are associated with breast cancer in a nucleic acid sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   25-NOV-2002; 2002US-0429136P.

Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide primer extension (SNPE) primers, and the sequences of regions flanking sites of single nucleotide polymorphisms SNPs. The present invention includes kits for determining the presence or absence of a SNP, using the oligonucleotides of the invention. The PCR primers are used to amplify a SNP flanking sequence, the SNPE primer is used as a genotyping primer. The oligonucleotides are useful for genotyping a nucleic acid sample by performing a single-nucleotide primer extension reaction. The oligonucleotides are useful for determining the presence, absence or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This 21 mer probe is used to screen a human lymphoblastoid cell line-derived lambda EMBL3 genomic library. The positive clones obtd. are sequenced and their overlapping sequence information is used to prepare synthetic DNA sequence used in the prepn. of recombinant human factor IX A trans-immortalised cell line with the ability to express human factor IX can be produced as can transgenic animals having this exogenous DNA fragment integrated into their genomes. The recombinant human factor IX is useful in the treatment of type B haemophilia. See also Q10784-88 and Q10853-63. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 21

Phenotypic traits include diseases e.g. agammaglobulinaemia, diabetes insipidus, Lesch-Nyhan syndrome, muscular dystrophy, familial hypercholesterolaemia, polycystic kidney disease, osteogenesis imperfecta and acute intermittent porphyria. Phenotypic traits also include symptoms of or susceptibility to multifactorial disease of which a component is or may be genetic such as autoimmune diseases, including, rheumatoid arthritis, multiple sclerosis, inflammation, cancer, nervous system diseases and infection by pathogenic microorganism. The method is also useful in forensic investigations and paternity analysis. The present sequence represents a PCR primer specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SNPE; genotyping; agammaglobulinaemia; diabetes insipidus; cancer; Lesch-Nyhan syndrome; muscular dystrophy; familial hypercholesterolaemia; polycystic kidney disease; osteogenesis imperfecta; autoimmune disease; acute intermittent porphyria; rheumatoid arthritis; multiple sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 21 BP; 6 A; 6 C; 5 G; 4 T; 0 U; 0 Other;

```

primer extension (SNPE) primers, and the sequences of regions flanking sites of single nucleotide polymorphisms SNPs. The present invention includes kits for determining the presence or absence of a SNP, using the oligonucleotides of the invention. The PCR primers are used to amplify a SNP flanking sequence, the SNPE primer is used as a genotyping primer. The oligonucleotides are useful for genotyping a nucleic acid sample by

a single-nucleotide

primer extension

Sequences AAH37205 - AAH40944 represent PCR primers,

single nucleotide

Claim 1; Page 56; 83pp; English.

sample.

Phenotypic traits include diseases e.g. agammaglobulinaemia, diabetes insipidus, Lesch-Nyhan syddrome, muscula dystrophy, familial hypercholesterolaemia, polycystic kidney disease, osteogenesis imperfecta and acute intermittent porphyria. Phenotypic traits also include symptoms of or susceptibility to multifactorial disease of which a component is or may be genetic such as autoimmune diseases, including, rheumatoid arthritis, multiple sclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 diseases, including, rheumatold architatis, muture everyone inflammation, cancer, nervous system diseases and infection by pathogenic microorganism. The method is also useful in forensic investigations and microorganism. The method is also useful in forensic investigations and microorganism. The method is also useful in forensic investigations and microorganism.
                                                                                                                                                                                                                                          Determining complementarity of nucleotide fragment for gene analysis, comparing flow of electric current from or to electroconductive subst through DNA fragment, with reference obtained from its complement.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Complementary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              03-APR-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAF24290
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 21 BP; 5 A; 6 C; 4 G; 5 T; 0 U; 1 Other;
                                                                                                                    The present invention provides a method for analysing a nucleic acid strand to determine the degree of complementarity between two sequences. This involves the measurement of an electric current along the annealed strands compared to a standard. This is useful in the analysis of genetic strands compared to a standard. This is useful in the analysis of genetic strands compared to a standard.
                                                                                                                                                                                                           Example 1; Page 12; 28pp; English.
                                                                                                                                                                                                                                                                                                                    WPI; 2001-140003/15.
                                                                                                                                                                                                                                                                                                                                                                                                                            07-JUN-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
            i (KIKI), bradykinin receptor B2 (BDKRB2), angiotensin converting enzyme 2 (ACB2) or protease inhibitor 4 (PI4), comprising at least one polymorphic position. Also included are (1) a probe that hybridises to a polymorphic position as provided in the detailed summary of single nucleotide polymorphisms comprising additional 5 and 3 flanking genomic sequence; (2) analysing (M1) at least one nucleic acid sample comprising obtaining the sample from one or more individuals and determining the nucleic acid sequence at one or more polymorphic positions in a gene encoding a protein selected from the group above; (3) constructing (M2) haplotypes using the genes comprising grouping at least two nucleic acids; (4) identifying (M3) an individual at risk of developing a disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cardiovascular disease; angina pectoris; hypertension; heart failure; myocardial infarction; ventricular hypertrophy; vascular disease; aneurysm; embolism; thrombosis; corronary artery disease; angioedaema; arteriosclerosis; atherosclerosis; hypersensitivity; sepsis; autoimmune disease; inflammatory arthritis; cancer; wound; viral infection; bacterial infection; fungal infection; COPD;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       tachykinin receptor B1; TACR1; C1 esterase inhibitor; C1NH; 
KKK1, bradykinin receptor B2; BDKBB2; gene therapy;
angiotensin converting enzyme 2; ACE2; protease inhibitor 4;
polymorphism; haemangioma; tumour; sarcoma; Crohn's disease;
                                                                                                                                                                                                          The invention relates to an isolated nucleic acid from a human gene encoding aminopeptidase P (XPNEP2), bradykinin receptor B1 (BDKRB1) tachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH), kalli
                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid with at least one polymorphic position, useful for detecting, diagnosing and treating disorders such as angioedema, cancer, viral, bacterial or fungal infection, cardiovascular and
                                                                                                                                                                                                                                                                                                                                                                                                                                           Tsuchihashi Z, Hui L, Swanson BN, Powell JR;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CC using the polymorphic data; (5) a library of nucleic acids, each of which CC comprises one or more polymorphic positions within a gene encoding a CC human protein selected from the group above; and (6) genotyping (M4) an CC individual comprising obtaining a nucleic acid sample, determining the CC nucleotide present in at least one polymorphic position, and comparing at CC least one position with a known data set. The genes, (M1, M2, M3 and M4) CC and compositions are useful for detecting, diagnosing, treating, CC preventing various disorders such as angioedaema and diseases which CC involve angiogenesis like haemangiomas, tumours, sarcomas, Crohn's CC disease, trachomas, and cardiovascular diseases like angina pectoris, CC hypertension, heart failure, myocardial infarction, ventricular CC hypertension, heart failure, myocardial infarction, ventricular CC hypertension, heart failure, myocardial infarction, ventricular CC hypersensitivity reactions, sepsis, autoimmune diseases, inflammatory CC arthritis, cancer, wounds, viral, bacterial or fungal infection, Chronic Obstructive pulmonary disease (COPD) and enterocolitis (many other CC diseases and disorders are listed in the specification). The CC against the proteins may be utilised for immunophenotyping of cell lines and biological samples. The present sequence is included in the sequence of listing but is not referred to anywhere plac in the securification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁

```
CC (ACE2) or protease inhibitor 4 (P14), comprising at least one polymorphic position. Also included are (1) a probe that hybridises to a CC polymorphic position. Also included in the detailed summary of single converting enzyme (2) analysing (M1) at least one muclecide polymorphisms comprising additional 5 and 3 flanking genomic converting the sample from one or more individuals and determining the comprising obtaining the sample from one or more individuals and determining the converting from the group above; (3) constructing (M2) at least one nucleic acid sequence at one or more polymorphic positions in a gene concoding a protein selected from the group above; (3) constructing (M2) comprises one or more polymorphic positions at least two nucleic acids (2) (4) identifying (M3) an individual at risk of developing a discorder (2) upon administration of an ACE inhibitor and/or vasopeptidase inhibitor (2) (3) constructing (M2) and (3) identifying (M3) an individual at risk of developing a discorder (3) comprises one or more polymorphic positions within a gene encoding a comprise one or more polymorphic positions within a gene encoding a comprise one or more polymorphic positions within a gene encoding a comprise one position with a known data set. The genes, (M1, M2, M3 and M4) and compositions are useful for detecting, diagnosing, treating, (4) individual compositions are useful for detecting, diagnosing, treating, (4) individual various and comparing at composition with a known data set. The genes, (M1, M2, M3 and M4) and (4) compositions are useful for detecting, diagnosing, treating, (5) and compositions, and comparing at composition various such as angioedaema and diseases which (5) and composition with a known data set. The genes, (M1, M2, M3 and M4) and (5) composition with a known data set. The genes, (M1, M2, M3 and M4) and (5) composition are useful for detecting, diseases which (5) compositions are useful for detecting, composition, compositions, compositions, compositions, compositions, compositions, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid with at least one polymorphic position, us for detecting, diagnosing and treating disorders such as angioedema, cancer, viral, bacterial or fungal infection, cardiovascular and

Ct tachnykinin receptor Bi (YACKI), to escerable inhibitor (CINH), Kallikrein CC (CINH), Comprising at least one CC polymorphic position as provided in the detailed summary of single CC nucleotide polymorphisms comprising additional 5' and 3' flanking genomic sequence; (2) analysing (M1) at least one nucleic acid sample comprising CC obtaining the sample from one or more individuals and determining the nucleic acid sequence at one or more polymorphic positions in a gene CC encoding a protein selected from the group above; (3) constructing (M2) an individual at risk of developing a disorder CC using the polymorphic data; (5) a library of nucleic acids, each of which comprises one or more polymorphic positions within a gene encoding a nucleic acid sample, determining the nucleic data; (5) a library of nucleic acids, each of which CC comprises one or more polymorphic positions within a gene encoding a nucleic data; (5) a library of nucleic acids, each of which CC comprising obtaining a nucleic acid sample, determining the cC involve angiogenesis like haemangiomas, tumours, sarcomas, Crohn's CC involve angiogenesis like haemangiomas, tumours, sarcomas, Crohn's CC disease, trachomas, and cardiovascular diseases like angina pectoris, and compositions are useful for detecting, disgnosing, treating, pectoris, of hypertrophy, vascular diseases, aneuryme, embolism, thrombosis, coronary CC artery disease, arteriosclerosis and/or atherosclerosis, and compositions are also useful for chromsome infection. Antibodies coblymucleotides are also useful for chromsome identification. Antibodies colymucleotides are also useful for chromsome identification. Antibodies colymucleotides are also useful for chromsome identification.
against the proteins may be utilised for immunophenotyping of and biological samples. The present sequence is included in the listing but is not referred to anywhere else in the specificat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    encoding aminopeptidase P (XPNEP2), bradykinin receptor B1 (Bitachykinin receptor B1 (TACR1), C1 esterase inhibitor (C1NH),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     autoimmune diseases.

                                comprises detecting tandem repeats in a target coding sequence, scoring the repeats for polymorphic probability and generating a dataset correlating the repeats with polymorphic probability to identify a candidate polymorphic repeat. The computational methods (polymorphic marker prediction of ubiquitous simple sequences, POMPOUS, and Rep-X) are useful for identifying and detecting candidate polymorphic repeats in human genes, which can be used to understand, treat or eliminate genetic diseases, predispositions or adverse drug-treatment reactions. Examples of diseases linked to nucleotide repeats are Machado-Joseph, Haw River syndrome, Huntington's disease, fragile-X syndrome, Fredreich's ataxis, myotonic dystrophy, hyperandrogenaemia, spinal and bulbar atrophy and spinocerebellar ataxia. The sequences presented in ABX79676-ABX80022 are the polymorphic repeats identified for a search of human ESTs
                                                                                                                                                                                                                                                                                                                                                                Identifying a candidate polymorphic repeat within a coding sunderstanding or treating genetic disease, comprises detectivepeats in a target coding sequence and scoring the repeats
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          EST; expressed sequence tag; ss; polymorphic repeat; tandem repeat; polymorphic marker prediction of ubiquitous simple sequences; POMPO Rep-X; human; genetic disease; drug-treatment; Machado-Joseph; Haw River syndrome; Huntington's disease; fragile-X syndrome; Fredreich's ataxis; myotonic dystrophy; hyperandrogenaemia; spinal atrophy; bulbar atrophy; spinocerebellar ataxia.

                                                                                                                                                                                       The invention comprises a method of diagnosing schizophrenia or a susceptibility to schizophrenia. The method involves detecting a polymorphism in a gene encoding a calcineurin (CN) subunit or CN-interacting molecule. The method of the invention is useful for the diagnosis of schizophrenia or a susceptibility to schizophrenia. The present DNA sequence represents a genotyping PCR primer that was used in an example of the invention.
                                                                                                                                                                                                                                                                                Diagnosing schizophrenia or susceptibility to schizophrenia comprises detecting a polymorphic variant of a polymorphism in a coding or non-coding portion of a gene encoding a calcineurin (CN) subunit or a CN interacting molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               schizophrenia; polymorphism detection; calcineurin; CN; CN-interacting molecule; PCR; primer; ss; genotyping; PPP3CA; calcineurin A catalytic subunit-alpha.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC multiplication disease of repeated trinucleotide sequence. The methods convolves amplification of the repeated trinucleotide sequence by PCR, cc analysis of the amplified product on microcapillary electrophoresis (CE), cc and determining the number of repeated trinucleotide repeats on the basis cc and determining the number of repeated trinucleotide repeats on the basis cc and determining the number of repeated trinucleotide is repeated 7-22 times in cc genetic region 9q13-q21.1, a GAA trinucleotide is repeated 7-22 times in cc genetic region 9q13-q21.1, a GAA trinucleotide is repeated 7-22 times in cc requence is that of reverse primer FR which is specific to the FA cc repeated trinucleotide sequence region. It is used with forward primer FR cc (see ABZ59550) to detect FA. A diagnosis kit comprising these primers is claimed. In a healthy subject, a PCR product of 157 bp is produced. Use cf CE, especially fabricated as an on-chip analysis system, allows the csize of the PCR product to be measured rapidly, with accuracy and cc reproducibility. The method allows diagnosis before the disease develops and determination of whether a silent carrier will develop the disease or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The method of the invention has cytostatic applications and may be useful for identifying a risk of breast cancer,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Roth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Identifying a subject at risk of breast cancer by detecting the presence or absence of one or more nucleotide polymorphic variations, useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         25-NOV-2002; 2002US-0429136P.

Preventing melanoma in a subject comprises detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample from a subject; and administering a melanoma preventative to a subject in need thereof based upon the presence or absence of the one or more polymorphic variations in the nucleic acid sample. The preventative reduces ultraviolet (UV) light exposure to the subject. The methods, nucleic acids, proteins, and compositions are useful for treating melanoma. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying a subject at risk of melanoma, useful for treating melanoma, comprises detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample from a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   from a subject. Preventing melanoma in a subject comprises detecting presence or absence of one or more polymorphic variations associated melanoma in a nucleic acid sample from a subject; and administering a melanoma preventative to a subject in need thereof based upon the presence or absence of the one or more polymorphic variations in the nucleic acid sample. The preventative reduces ultraviolet (UV) light exposure to the subject. The methods, nucleic acids, protesins, and compositions are useful for treating melanoma. The present sequence represents a human cardiac ankyrin repeat kinase/fucose-1-phosphate
The invention relates to a method of identifying a subject at risk of melanoma comprising detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample from a subject preventing melanoma in a subject comprises detecting the presence or absence of one or more polymorphic variations associated with melanoma in a nucleic acid sample from a subject; and administering a melanoma preventative to a subject in need thereof based upon the presence or absence of the one or more polymorphic variations in the nucleic acid sample. The preventative reduces ultraviolet (UV) light exposure to the subject. The methods, nucleic acids, proteins, and compositions are useful for treating melanoma. The present sequence represents a human cyclin-dependent kinase 10, CDK10, proximal SNP probe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         melanoma associated polymorphic variation; SNP; single nucleotide polymorphism; cyclin-dependent kinase 10; CDK10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                guanylyltransferase, CARK/FPGT, proximal

                                                                                                 The generic sequence of a primer set designated Alu-2. The primer set was based on bases 240-58 of the 3' end of a 300 bp Alu segment. The primers of the set have an identical sequence to the Alu consensus sequence. Thus priming with the Alu-1 set directs synthesis towards the 3' end (i.e. away from the middle) of the Alu segment. Since the primer set is designed to bind close to the edge of an Alu segment, amplification with these primers will reduce the amount of Alu segment sequence and increase the amount of specific chromosomal DNA present required for probe production. The primer set is useful in the production of chromosomal specific probes e.g for the detection of chromosomal presents such as a probe to detect chronic myelogenous leukemia characterised by the philadelphia chromosome, arising from a reciprocal translocation t(9,22) (q34,q11). (Updated on 25-MAR-2003 to correct PN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 18
